

Michael Bo Aas Rosendal

2026-03-30

Aarhus V

[English translation of the original Danish recommendation]

Recommendation

Michael Bo Aas Rosendal completed an internship with NCC's Innovation and Business Intelligence digitalization unit from January 9, 2026, to March 27, 2026, as part of his degree in Computer Science.

During his internship, Michael worked on a variety of tasks that clearly demonstrated both his professional skills and his strong commitment. His primary area of work was software automation (RPA); he quickly grasped complex issues and worked independently on specific deliverables. In doing so, he demonstrated a solid technical understanding and a strong command of C#.

Michael works in a structured and methodical manner and places great emphasis on thoroughly documenting his work. Furthermore, he independently managed a development project from concept to implementation, including direct communication with the client. This reflects both professional maturity and excellent collaboration skills.

It has been impressive to observe his technical proficiency and his ability to quickly familiarize himself with new tasks.

On a personal level, I have come to know Michael as a good listener and an observant, highly approachable individual. He makes an extra effort to understand new business areas - in our case, the construction industry - and is able to assess where he can make the best contribution while maximizing his learning in relation to his academic objectives. Michael is well-liked by his colleagues, and his friendly, positive nature has contributed to a good, constructive work environment.

I hereby highly recommend Michael and am happy to provide further details.

Best regards

Jacob Güldner

Head of Innovation and Business Intelligence
